

SaaS Security Checklist

Component	Description
<input type="checkbox"/> Multi-factor authentication (MFA)	Verifies user identity by requiring an additional code or prompt in addition to a username and password.
<input type="checkbox"/> Threat monitoring	Tracks user activities in real-time to spot unusual behavior early and prevent potential breaches.
<input type="checkbox"/> Regular access reviews	Assesses who can view or change critical data, removing inactive or unauthorized users.
<input type="checkbox"/> Network segmentation	Divide your network into smaller zones to contain threats, minimizing damage if one segment is compromised.
<input type="checkbox"/> Incident response plan	Outlines a clear method to contain and resolve security incidents, with specific steps for different team members or departments.
<input type="checkbox"/> Data encryption	Protects data at rest and in transit using robust encryption standards, reducing the risk of exposure even if an attacker gains partial access.
<input type="checkbox"/> Logging and audit trails	Generates detailed records of user logins, configuration changes, and other key events, helping in compliance audits and forensic investigations.
